

LIGHT FIXTURE FOUNDATION

Abstract of the Disclosure

[0036] A light fixture foundation that has a hollow shaft with a tubular wall that extends along a central longitudinal axis, and a first cableway opening that extends through the tubular wall along a first axis that is substantially perpendicular to the longitudinal axis. A second cableway opening extends through the tubular wall along a second axis that is substantially perpendicular to the longitudinal axis. The second axis is laterally spaced from the first axis such that the first and second axes and the first and second openings are non-coaxial. A support member for supporting a lighting assembly is coupled to the shaft. The support member has a passageway in communication with the hollow shaft for receiving first and second cableways.
